

Welcome to Science Class!

Tuesday February 15th

Challenge Question!

What can you discover about an organism in a laboratory investigation?

1) Please sit in your regular flavor seats, with your binder and a properly shaped pencil out.

2) Begin Entry #50: Observing Organisms

Observation or Inference??

"The condors are fighting!"

Observation: The condors are holding each end of the rabbit and pulling in opposite directions.

"The macaw is looking at us."

Observation: The front of the macaw's head is pointed toward in our direction.

"The squirrel is looking for food."

Observation: The squirrel is using its front paws to dig into the ground.

Observation

Information obtained through the use of one or more senses

Inference

A judgement or conclusion made as a result of one or more observations.

**Follow steps Procedure 3-9.
Record all observations from 5,6 and 9 on your
chart. Handle the worm gently!**

**Answer Analysis 1-4. For #3, underline at least
4 observations in your paragraph.**
